

Case Study

RESIDENTIAL

The desire was for a building that “complements and enhances the rich textures of the existing local architecture”...

One Hyde Park, London

Spanning an area of 65,000 sq ft, One Hyde Park's contemporary four towers is home to 86 residential apartments & duplexes and three retail units, as well as space for 139 vehicles and 114 bicycles on two basement levels. The residents' facilities also include a private cinema, 21 metre swimming pool, squash court, gym and award-winning hotel, the Mandarin Oriental.

As part of the project, Crestron 12" Colour touch panels were installed in each apartment to become the control system for heating, blind control, audio, front door entry and CCTV surveillance. Continuing the all-encompassing system, the control panels also accommodate an integrated Simplikate concierge system.

The Simplikate software has been programmed to provide residents with an assortment of concierge amenities including reservation services, front desk management, valet, dining, amenity management and even access to camera views from around the property to check conditions before leaving the apartment.

PROJECT LOCATION

London, England

PROJECT VALUE

£1,200,000
